PROFESSIONAL SUMMARY

Full-stack developer with two years of experience delivering scalable, HIPAA-compliant web applications in regulated healthcare. Combines React/TypeScript front ends with Spring Boot and FastAPI services, REST APIs, and automated testing. Focused on building AI-powered applications, cloud infrastructure, and developer tooling.

WORK EXPERIENCE

Software Engineer | Blue Cross Blue Shield

June 2024 - January 2026

- Pioneered the company's first member-facing, HIPAA-compliant AI search platform for 1M+ users on Azure with Python, Java/Spring Boot, and RAG (Retrieval-Augmented Generation), reducing information discovery time by 50%
- Optimized CI/CD pipelines (Jenkins, UCD) by refactoring build dependencies, reducing build times by 60% (10 to 4 minutes) and accelerating production deployments
- Established a reusable React/TypeScript component library, delivering 156+ pull requests and 350+ code reviews over 12 months, featuring a sub-50ms autocomplete component for 500K+ users
- Led telemetry and analytics integration (Adobe Analytics, ELK, PostgreSQL) for the search platform, shaping UI architecture decisions across a 12-person team and 100+ collaborating developers

Software Engineer Intern | Blue Cross Blue Shield

June 2023 - August 2023

- Shipped the native iOS Add Project workflow (Swift, Objective-C) from Figma designs across 20+ production PRs at 100% test coverage, enabling users on the 30,000-user employee app to generate real-time project cost estimates
- Engineered an interactive financial dashboard leveraging RESTful microservices, optimizing client-side state management to stream real-time data connections
- Collaborated across 4 cross-functional teams (India, multiple time zones) using Agile workflows (JIRA, Git) to deliver user-facing features within sprint deadlines

PROJECTS

Multiplayer AI | Collaborative AI Coding Environment

August 2026 - Present

- Contributed to a multiplayer AI coding platform across a Turborepo workspace, developing prompt voting, Supabase-backed real-time group chat, and room-based agent workflows
- Created a 3-layer multi-agent orchestration engine on Vercel AI SDK's ToolLoopAgent, with a Lead coordinating subagents-as-tools via role-scoped tool access and a Verifier evaluating outcomes
- Built a provider-agnostic streaming AI chat interface through Next.js route handlers, enabling runtime model switching with context replay, cross-provider normalization, and adaptive compaction for 1M-token context windows

Moonbites | Full-Stack Web App

November 2025 - Present

- Built a full-stack recipe application using React, TypeScript, and FastAPI, parsing 50+ recipes across blog and video formats into structured, personalized recipe views
- Engineered a JSON-LD parser and Gemini-backed extraction pipeline converting inconsistent blog markup and short-form video captions into Supabase records, averaging ~0.9s per parse and deduplicating via 7-field recipe fingerprints
- Devised agentic development workflows with Claude Code and Codex, delegating scaffolding, test generation, and cross-file refactors across the codebase through scoped task specs, cutting feature turnaround from days to hours

EDUCATION

Bachelor of Science in Software Engineering

May 2024

The University of Texas at Dallas | Minor in Biology

SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++, SQL, HTML/CSS, Swift

Frameworks & APIs: React, Node.js, Spring Boot, FastAPI, Tailwind CSS, REST APIs, OpenAI/Gemini/Claude APIs

AI, Data & Cloud: RAG, Vector Databases, PostgreSQL, Supabase, Azure, data normalization

DevOps & Tools: Docker, Kubernetes, Jenkins, Git, Jest, Playwright, Storybook, JIRA, UCD
